

GREEN PYRETHRUM

Codice prodotto: 2770550

Category: PFnPE

Emulsifiable concentrated liquid insecticide based on natural Pyrethrum

Italian Ministry of Health Registration:

PFnPE Reg. n. 8558

Formula:

Pure pyrethrins (Pyrethrum)

Description:

GREEN PYRETHRUM is an insecticide based only on natural Pyrethrum in a liquid medium of plant origin and can be used on many agricultural crops in any season.

GREEN PYRETHRUM is a contact insecticide that acts quickly against various pests in horticulture, fruit and flower production.

GREEN PYRETHRUM is compatible with foliar fertilisers. Cannot be mixed with Bordeaux mixture.

Method of use:

GREEN PYRETHRUM Dilute in water before use. Treatments should be carried out at the first appearance of the pests, preferably in the evening and during the cooler hours of the day.

The following doses are per 100 litres of water.

- CITRUS FRUIT (orange, lemon, mandarin) – against aphids, Whitefly (Aleyrodidae): ml 140-160.
 - STONE FRUIT (peaches, plums, cherries, apricots) – against Aphids (Myzus persicae), spotted wing drosophila (Drosophila suzukii): ml 140-160.
 - VINE (wine grapes and table grapes) – against vine moth (Clysia ambiguella), grapevine moth (Lobesia botrana), leafhoppers (Scaphoideus titanus, Empoasca vitis): ml 140-160.
 - STRAWBERRY – against thrips, spotted wing drosophila (Drosophila suzukii): ml 140-160.
 - SOFT FRUITS (raspberry, blueberry, blackberry, currant) – against spotted wing drosophila (Drosophila suzukii): ml 140-160.
- LEAFY VEGETABLES, FRESH HERBS AND EDIBLE FLOWERS*.

– against aphids: ml 140-160.

- TOMATO, PEPPER, AUBERGINE – against whitefly (Aleyrodidae), thrips: ml 140-160.

- CUCURBITS (Squash and Melon) – against aphids: ml 140-160.

- FLORAL AND ORNAMENTAL (open field) – against aphids, thrips, whitefly (Aleyrodidae): 140-160 ml.

*Lettuce and salads (Dolcetta/valerianella/gallinella, lettuce, scarole/broad-leaf endive, cress and other sprouts and buds, barbarea, rocket, juncea mustard, baby leaf products (including brassicaceae), spinach leaves and similar (spinach, portulaca, chard and silver beet), vine leaves and similar species, watercress, witloof/Belgian chicory, fresh herbs and edible flowers (chervil, chives, celery leaves, parsley, sage, rosemary, thyme, basil, etc.), Fresh herbs and edible flowers (bay leaves, tarragon, others).

Use appropriate volumes of water and pressure to achieve good crop coverage. Particular attention should be paid to the underside of the leaves in the case of Aleyrodidae (whitefly) and thrips.

Suspend treatments:

- 1 day before harvest for citrus fruits, vines, leafy vegetables, fresh herbs and edible flowers, tomatoes, peppers, eggplants, gourd family

- 2 days before harvest for strawberries and soft fruits

- 7 days before harvest for stone fruit.

User:

Domestic
