

UNIPRO 5

Codice prodotto: 3200037

Category: Absent

ULV electric cold fogger

Description:

Ultra low volume electric cold fogger for the dispensing of insecticidal and bactericidal solutions. Ideal for large spaces, it enables effective spatial treatments with reduced processing times and lower costs. Excellent solution for treatments in the food industry. The ULV fog generated is composed of particles of approximately 20 microns.
The transformation of the solution into ULV takes place by means of a high-pressure air jet. The presence of a dosing nozzle allows a constant delivery speed and uniformity of the drops produced. For the same quantity of solution, smaller drops ensure a higher density of fog and better distribution of the solution with a longer suspension time in air. All this ensures greater treatment effectiveness;

Technical information:

Dimensions: 59 x 57 x 116 cm
Flow rate: 10-18 l/h
Tank capacity: 20 l
Weight: 56 kg

Method of use:

Position the UNIPRO 5 in the room to be treated in a suitable place for correct operation and equidistant from the walls of the room.
Check that the spray nozzle is in the correct position with a slightly upward spray pattern. Do not aim the spray directly at surfaces (floors, walls, roofing, etc.) or objects in the room (machinery, equipment, cardboard boxes, etc.).
READ THE USER MANUAL CAREFULLY BEFORE USING UNIPRO 5
Apply all the safety measures set out in the instruction manual. Do not use the device if it is not working properly. Follow the dosage instructions in the manual carefully. Never leave the device running longer than necessary. Use appropriate PPE.

User:

Professional

Warnings:

Read the user manual carefully before using unipro 5.
