

CUBE 3

Codice prodotto: 3200063

Category: Absent

Portable ozone unit for air treatment.

Description:

Portable ozone unit with integrated oxygen conversion system. Easily transportable and can be used to sanitise small and medium sized rooms. The ozone production is 8 gr/h through 8 programmes with cycles from 15 minutes to 24 hours. CUBO3 is able to generate ozone and subsequently remove it in a safe way for the operators who use it. In a first phase, the room is enriched with ozone by a generator with a power of 8 gr/h in order to reach high concentrations in a very short time. Subsequently, CUBO3 will automatically activate the second operational phase which will remove any residual ozone, decomposing it into oxygen and ensuring that the concentrations are within the norms of the directive establishing acceptable thresholds and limits.

Technical information:

– Weight: 7.3 kg
Dimensions: 28 x 28 x 28 cm

Method of use:

CUBO3 must be placed inside a room (room, garage, cell, warehouse, processing room, etc.) and once the most suitable programme has been chosen, it will carry out a complete cycle of ozone introduction and reconversion.
Ozone interacts with odours, bacteria, viruses, fungi, generating two events: oxidation and disinfection. Ozone acts very quickly, destroying bacteria, moulds, odours and inactivating viruses as soon as they come into contact. The end result is natural and clean oxygen.
