

COPYRMATIC EVOLUTION REMOTE

Codice prodotto: 3300031

Category: Absent

Programmable automatic dispenser with remote control

Description:

Professional automatic dispenser, fully programmable directly using the remote control, for timed emptying of aerosol cans. Modern and discreet design that adapts to any environment. Extremely quiet; once positioned and started, no further intervention is required to spray.
The special canisters with dosage valve are activated by the appliance, releasing a predefined quantity of product (insecticide, deodorant or air freshener) which, as it spreads throughout the room, controls infestations of flying insects, creating an effective barrier against re-infestation, deodorising the environment or neutralising unpleasant odours.

Technical information:

Dimensions: 9.4 x 21 x 8.3 cm
Weight: 350 g
Power supply: 2 C batteries

Method of use:

Place the dispenser at least 2 metres above ground and point it so that the spray is directed away from people. If insecticide canisters are used, place it near doors and windows so that the barrier effect prevents insects from entering the treated area, thus protecting it from re-infestation. Select dispensing at 15-minute intervals.
The “standard” setting is to spray every 15 minutes for 24 hours a day. Under standard conditions, the lifetime of a Copyr cylinder is approximately 30 days.
Using the remote control it is possible to programme the dispensing frequency according to the requirements of different spaces: at intervals of 5, 10, 15, 20, 25 and 30 minutes; it is also possible to decide the number of dispensings (from 1 to 3) with each single activation.
Operation can be continuous over 24 hours (sun&moon) or only by day (sun) or only night (moon); it is also possible to programme the operation for only 8 hours (with 16 hours pause) or only for 12 hours (with 12 hour pause).
Thanks to the test button on the remote control it is always possible to effect a single dispensing.
The dispenser is equipped with a light indicator that warns when the dispenser is in operation (green light), when it is paused (alternating green/red light), and when it is necessary to replace the cylinder (red light) after approximately 3000 dispensings

from the start.
