Adhesive trap for cockroaches

Description:

Adhesive trap with food attractant for catching cockroaches (*Blattella Germanica, Periplaneta Americana and Blatta Orientalis*). It is equipped with specific attractants that exert an irresistible attraction on cockroaches which, once attracted inside the trap, remain trapped on the layer of adhesive without any possibility of escape.
Very discreet, the trap is made of yellow cardboard.

Technical information:

Area of coverage: 10 cu.m.
Duration: 6 weeks

Method of use:

After activating the trap by removing the protective paper from the adhesive surface, close it in line with the instructions and place it along the potential pathways of the cockroaches. Check for catches every 2 to 3 days and replace trap when full.
Once the trap has been opened and set, the attractant in the adhesive layer lasts up to 6 weeks.
Suitable for monitoring operations and minor control actions. Solves the problem of infestation without the use of poisons or chemicals, without hazardous spring-loaded mechanisms and in a hygienic and safe way.
In cases of strong food competition it is possible to use food attractant tablets (optional).
