

LEGOCORTEX

Codice prodotto: 2444025

Category: Absent

MASTIC FOR GRAFTING AND PRUNING WITH HEALING ACTION

Formula:

Paste

Description:

LEGOCORTEX is an indispensable product for the correct grafting and healing of wounds caused by pruning, cutting or adverse weather conditions. The resin-based formulation gives LEGOCORTEX the necessary elasticity so that it can carry out its protective action without hindering the normal vegetative growth in the treated area. LEGOCORTEX does not drip and ensures easy and correct application without creating a mess.

Method of use:

For grafting: spread an even layer of LEGOCORTEX around the graft in order to fix the scions to the rootstock and protect the cuts from fungal attacks.

To heal: remove the torn bark by trimming the edges at an angle to the wound, in order to avoid water stagnation, then apply a thin layer of product on the wound. The elastic film that forms will protect the treated area from rot and promote wound healing.

In the case of old wounds, remove foreign material and dead wood until the healthy layer is reached, then cover with LEGOCORTEX.

User:

Domestic

Unit of sales:

250 g bottle with brush

500 g jar

1 kg jar

5 kg bucket
